

THE LONG ISLAND HOMEOWNER'S QUICK GUIDE TO BETTER WATER

Buy A Filter. Or Be A Filter.

Most Long Island homeowners don't think about their water until something feels off.

The reality is that water quality can affect far more than just what comes out of your kitchen faucet. It can impact your drinking water, plumbing, appliances, laundry, skin, hair, and overall comfort in your home.

5 COMMON SIGNS YOUR WATER MAY NEED ATTENTION

1

White Buildup on Faucets or Shower Doors

Hard water minerals can leave scale deposits on fixtures, dishes, and appliances.

2

Dry Skin or Hair After Showering

Excess minerals and chlorine may contribute to dryness and irritation.

3

Unpleasant Taste or Odor

A chlorine smell, metallic taste, or sulfur odor may indicate water quality concerns.

4

Staining in Sinks, Toilets, or Tubs

Orange, brown, or blue-green stains can be signs of minerals or plumbing-related issues.

5

Appliance Wear and Reduced Efficiency

Water heaters, coffee makers, dishwashers, and washing machines can all be affected by untreated water.

COMMON WATER SOLUTIONS

1

Whole-House Filtration

Treats water throughout the entire home.

2

Reverse Osmosis Drinking Water Systems

Provides cleaner, better-tasting drinking water at the tap.

3

Water Softeners

Helps reduce mineral buildup and hard water issues.

4

Smart Leak Detection & Water Monitoring

Provides real-time monitoring and alerts to help protect your home from costly water damage.

DID YOU KNOW?

Long Island receives its drinking water entirely from underground aquifers. While treated and regulated, local water conditions can vary significantly from one neighborhood to another—and even from one home to the next.

No two homes have exactly the same water.

Know Your Water. Trust Your Solution.
